“The greatest energy source is a human thought.
Electromagnetic oscillation arising in human brain cells
is the power which rules the world”

Everything around us was created and developed by the greatest human's mind. Simply look around! Windows, walls, lamps, nails, smartphones are all different but all these things were invented due to electromagnetic oscillation arising in human brain cells.

Let's take a look at the most important inventions for humanity.

First and the most significant discovery is fire. Firstly, man had to deal with wildfire. Then fire was transported to caves. People have learned how to get fire. Therefore they started to make a meal, defend from predators. As a result, other inventions like ceramics, metallurgy, steam engines became possible.

Second breakthrough is a wheel. Also, the wagon is closely related to this discovery. Scientists believe that the prototype of the wheel was a roll, few of them were placed under tree trunks during transportation.

Third invention is a possibility to write. No one can deny significance of this invention for the whole development of mankind. It's hard to guess in what way evolution of our civilization would go, if man didn't learn how to note significant information by symbols. This led to opportunity to save and transmit messages. Obviously, our society would not simply exist in its current form without writing.

Moreover, I can't match types of communication like telephone, telegraph, radio, Internet. About 150 years ago the only way to exchange information between Europe and England was shipping mail. People got to hear about what happened in other countries for weeks or even months later.

Also, electric lamp is a crucial device in human history. This invention appeared in our life at the end of the XIX century. At first, illumination appeared on the city streets and then it entered people's houses.

To sum up, I absolutely agree with Aleksandr Beliaev and his famous phrase “The greatest energy source is a human thought. Electromagnetic oscillation arising in human brain cells is the power which rules the world.” Because, if our brain wasn't able to develop we would still live in primitive community.
